

## CASE STUDY

# VALUECHAIN

Award-winning technology company Valuechain located to The Innovation Centre at Sci-Tech Daresbury in 2016. Specialising in providing smart software solutions to manufacturers, the company has offices based across the UK, China and India.

Valuechain's innovative technology digitalises manufacturing processes and supply chains to improve productivity, streamline collaboration and generate intelligence. The company has worked with the likes of luxury car manufacturer Bentley and international aeronautics company Airbus.

“

With the VEC we collaboratively developed a solution for Bentley, which would streamline the company's data capture process. Together, we were able to understand their process, and provide innovative data capture software, resulting in a 48 per cent reduction in time to capture, identify and resolve issues in the product lifecycle.

Working with the VEC we could then then take this one step further and turn this initial concept design into a virtual reality (VR), combining this with our data capture solution. It was this joint initial proposition that helped access Bentley as a potential client, all through being based here at Sci-Tech Daresbury.

The Innovation Centre perfectly suits our needs as a growing company. It's a high quality setting for events and networking opportunities and we're looking forward to the future and working closely with the team at Sci-Tech Daresbury.

”

– TOM DAWES,  
VALUECHAIN'S CHIEF EXECUTIVE
